You can find a detailed explanation of the trigger functionality and syntax [in this article](#).

The main requirement for running such MySQL Triggers is having MySQL **SUPERUSER** privileges.

Granting **SUPERUSER** MySQL privileges to a user hosted on a SiteGround server is not possible due to the server setup.

Here is an example of a MySQL trigger:

First, create the table for which the trigger will be set via [SSH](#):

```
mysql> CREATE TABLE people (age INT, name varchar(150));
```

```
THEN SET NEW.age = 0; END IF; //
```

```
Query OK, 0 rows affected (0.00 sec) mysql> delimiter ;
```

Insert two records to check the trigger functionality.

```
mysql> INSERT INTO people VALUES (-20, 'Sid'), (30, 'Josh');
```

```
Query OK, 2 rows affected (0.00 sec)
```

```
Records: 2 Duplicates: 0 Warnings: 0
```

In the end, check the result.

```
mysql> SELECT * FROM people;
```

```
+---+---+
```
